Robert Void’s *New Trees* series depict cell phone masts disguised to blend in with their surroundings.
This exhibition explores—through art, science, and material culture—the multivalent roles that trees play in society. These roles run the gamut from the physical, such as providing a place of protection and serving as fuel source or records of climate change, to the image of the tree as both taxonomy and locus for meaning.

In addition to prints of trees ranging from the 15th–19th centuries, *Trees* features the College’s Tree Endowment Program, student drawings and photographs of trees, and work by contemporary artists such as Robert Voi, Joan Nelson, David Nash, April Gornik, and Anthony Luensman.

Rounding out this multidisciplinary conversation is dendroclimatic research on Sonnenberg Village in Kidron, Ohio, by College of Wooster students enrolled in *Climate Change*; information about the College’s Department of Geology’s Tree Ring Lab; the Friends of Ohio Barns Wayne County survey project; and furniture crafted from reclaimed urban trees by the Seattle-based company, Meyer/Wells.

**Opening Reception**
Thursday, January 20
6:00–8:00 p.m.
Gallery talk, 7:00–7:20 p.m. by students enrolled in *Climate Change* at the College of Wooster

**Lunch in the Gallery**
Wednesday, February 2
12:00–1:00 p.m.
The College of Wooster’s Tree Endowment Program, Sara L. Patton, Vice President for Development and Beau Mastrine, Director of Grounds
